SPEEDY CLEAN SPECS & APPLICATIONS

Applications:

- Glass
- Plastic
- Painted Surfaces
- Chrome
- Aluminum
- Vinyl
- Hard Surfaces Of Car's Interior

Usage Directions:

For light to moderately dirty vehicles: Work from the top of the vehicle, progressing downward. Work on one section of the car at a time. Spray ample amount of product on the surface to be cleaned, wetting area thoroughly, but not enough to create excess runoff. Do not let product dry on the surface before wiping off. Always use a clean microfiber cloth to wipe the damp surface to remove the dirt and grime. Then flip the cloth to the dry side and wipe the remaining moisture to enhance the shine and prevent spotting.

For extra dirty surfaces: Repeat the process a second time for best results.

For best results:

- Start with the windows, before doing other surfaces. This will prevent spreading dirt to the glass and causing streaks.
- As one microfiber towel begins to show dirt build-up, switch to another clean towel to continue wiping. This will help prevent scratching and spreading dirt to other areas.
- Do not use in direct sunlight which will cause product to dry too quickly.

Available Configurations:

32 oz bottle (case of 12)

1-gallon (case of 4)
